

INTRODUCING

LIFT SHIELD

T E C H N O L O G Y

DRILLING SAFETY REDEFINED

Liftshield, by Uniber, is an innovative new magnetic safety system that is designed to prevent the dangerous potential of magnet failure. Liftshield works in an elegantly simple way; if the magnet does not have enough grip to create a safe drilling environment, the motor will not operate. Any machine in the Uniber offering where the 'Liftshield' logo appears comes Liftshield equipped.

1 Magnet has sufficient grip, creating a strong magnetic field. The motor will run and operate as normal.

2 Motor will not start / will shut off if: Material is painted, too thin, or too corroded to create a strong enough magnetic field OR magnet lifts off during operation, protecting the user from injury.
